## SAP EBP Training

admin · Thursday, August 13th, 2009

The e.Procurement-SAP EBP Project was aimed to develop a system used by all the internal offices (ranging from the HQ offices to the distributed post offices) to trigger the procurement of the needed products (forms, stamps, etc), using an intranet web systems integrated to the company ERP and with the main suppliers' systems. The project was based on mySAP SRM (BBP-EBP).

My main responsibility was to define and develop the electronic catalogs needed for the solution, to work on the EAI tool used to integrate the supplier side (webMethods technology), and give the post go live application support on the entire infrastructure (from the ERP-SAP admin to the Web and integration systems admin).

- Configuring EBP for e-Procurement
- Integrating EBP with SAP Workflow
- Overview of EBP 3.0
- Developing a Change Management Plan for the Transition to EBP e-Procurement
